

Ruslan Shayakhmetov

Senior Backend Engineer - Node.js · TypeScript · AWS

Bangkok, Thailand (UTC+7) · Kazakhstan citizen · B2B contractor (Kazakhstan sole proprietorship) · +7 777 680 9599

shayakhmetov.ruslan@icloud.com · <https://www.linkedin.com/in/shayakhmetov-ruslan/> · <https://github.com/shayaqhmetov>

SUMMARY

Backend engineer with 9 years of experience. Joined a clinical trial data platform as an engineer in 2019 and grew into technical ownership of 95 AWS services handling ingestion, validation and transformation of study data that pharmaceutical sponsors submit to regulators, over datasets up to 100 GB per file. In parallel, architected a real-time collaborative editing platform from scratch and lead the team of 3 building it. Depth in event-driven architecture, monorepo and CI/CD tooling at scale, and security remediation across large service estates. Based in Bangkok (UTC+7), available remotely as a B2B contractor.

EXPERIENCE

AWWCOR, Inc

Jul 2019 - Present

Senior Software Engineer

2023 - Present

Software Engineer

Jul 2019 - 2023

Global technology staffing firm; end client is an enterprise clinical-trial technology company (name withheld under NDA). Platform operates under GxP / 21 CFR Part 11 constraints - immutable audit trails, data lineage, role-based access control, controlled Dev/Test/Prod release process.

- Own all 95 Node.js/TypeScript services in the team's estate - high-throughput ingestion, validation and transformation pipelines over datasets up to 100 GB per file.
- Maintain backward compatibility across concurrent API versions so enterprise clients migrate on their own schedule.
- Standardized service-to-service contracts across the platform with generated OpenAPI SDKs and typed event schemas for an event-driven architecture, measurably reducing messages landing in dead-letter queues and eliminating a recurring class of integration failures.
- Led migration of long-running processing jobs off AWS Lambda onto EC2 to remove the 15-minute execution ceiling, so jobs that previously failed on timeout now run to completion.
- Consolidated the estate's 95 repositories into a monorepo with shared packages as a single source of truth, replacing per-repo node_modules and cutting delivery-management work from two weeks to one or two days.
- Built CI/CD across all 95 repositories - PR validation, automated versioning, artifact publishing - raising release quality by removing manual steps as a failure source and taking a release from weeks to one or two days.
- Drove a dependency remediation across all 95 repositories, eliminating 77 critical and 1,331 high severity vulnerabilities to reach zero outstanding critical/high findings.
- Acting technical lead for a team of 6 when covering for the team lead; 5-10 PR reviews/week and onboarded 6 hires.
- Unified testing across services with a shared mock package and migrated the suite to Jest, raising coverage from under 10% to over 70%.

Stack: Node.js, TypeScript, AWS (Lambda, SQS, S3, API Gateway, CloudWatch), PostgreSQL, Redis, SonarQube, Docker, CI/CD

Almaty Kitap - Senior Software Engineer / Project Lead (part-time)

Dec 2023 - Present

Concurrent with AWWCOR · Collaborative textbook authoring and layout editor (Figma-like canvas) for in-house editorial teams.

- Designed the entire system architecture from scratch - document model, CRDT-based real-time collaboration and conflict resolution (Automerge), canvas rendering, versioning and storage - and own every technical decision on the project
- Lead a team of 3 (2 engineers, 1 QA): scope definition, task breakdown, code review, release planning
- Took the product from zero to a working system now in internal testing, ahead of production rollout to in-house editorial teams

Stack: TypeScript, Node.js, NestJS, Next.js, PostgreSQL, Redis, Automerge (CRDT)

Lamoda - Software Engineer

Oct 2018 - Jul 2019

- Designed and built a fulfillment service giving local partners real-time stock management in place of a manual process, taken to pre-production and validated with a live footwear manufacturer

KulanOil - Full-stack Developer

Jul 2018 - Sep 2018

- Delivered the first version of an internal document-flow service, replacing paper approvals with a tracked digital workflow

Transavia LLC - Junior Full-stack Developer

Sep 2017 - Jul 2018

- Built the backend of a hotel reservation service, integrating the Amadeus GDS over XML/SOAP into an async booking pipeline

SKILLS

Languages - TypeScript, JavaScript, Python, SQL

Backend - Node.js, NestJS, Express, REST API design, event-driven architecture, microservices, serverless

Cloud & Infra - AWS (Lambda, SQS, S3, API Gateway, CloudWatch), Docker, CI/CD, Linux

Data - PostgreSQL, MongoDB, Redis

Practices - system design, observability and incident response, quality gates (SonarQube), unit/integration testing, code review, mentoring

EDUCATION

B.Sc. Computer Science - SDU University, 2018. Best Diploma Project award.
